

DHT-S514

SOUNDBAR WITH
WIRELESS SUBWOOFER

DENON®

BIG SOUND FOR THE THIN SCREEN

As high definition flat panel TV screens become ever thinner, manufacturers are increasingly challenged to provide comparable sound quality from ever smaller integral speakers. The Denon DHT-S514 state-of-the-art TV soundbar is the flat screen solution for big picture sound, with simple HDMI and Bluetooth wireless plug-and-play connectivity, and realistic surround sound capabilities and a wireless subwoofer, for fully enveloping TV and music sound.

The DHT-S514 is a low visibility, hi-fidelity sound system that delivers powerful dynamic audio from the dual channel 2-way soundbar and wireless connected subwoofer.

It instantaneously transforms your flat screen TV into a home entertainment center – for TV and movie viewing, gaming, or high quality music playback. Connectivity includes digital, analogue and wireless inputs, with aptX Bluetooth streaming for CD-quality wireless audio from Bluetooth equipped portable devices, smartphones and tablets. In addition, Denon Virtual Surround technology simulates full multi-channel home theater surround sound with Dolby Digital and DTS decoding. Selectable listening modes include Night Mode for late night viewing enjoyment without disturbing other household members.

High Performance Sound

The DHT-S514 features a host of high performance components and replay technologies to deliver rich, dynamic, full-range, room enveloping TV sound and music. The soundbar features dual 2" x 5" oval mid range drivers and 1/2" tweeters, for crystal clear hi-fidelity audio reproduction. The powerful subwoofer effortlessly handles deep bass frequencies, right down to ground shaking cinema sound effects, from its dual 5 1/4" driver woofer chassis'. Wireless operation means the sub can be positioned anywhere in the room, vertically or horizontally.

Simple TV Connectivity

Connection of the DHT-S514 to a TV is with the included HDMI cable. HDMI ARC (Audio Return Channel) functionality also enables sound from other audio-video devices connected with HDMI to the TV to be played via the DHT-S514; as well as audio from integrated DVB (satellite or cable) or digital terrestrial TV tuners. If a TV does not support HDMI ARC, connection via the optical or coaxial digital input enables sound from the TV and other audio sources connected to or integrated within it, to play through the DHT-S514.

Bluetooth Wireless Streaming

The Bluetooth wireless input enables audio to be streamed from compatible Bluetooth enabled devices such as smartphones, tablets or computers (with Bluetooth A2DP capability).

Multiple Digital and Analogue Inputs

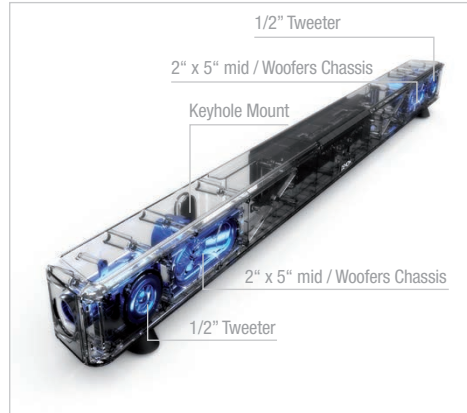

A wide range of connectivity options, including optical and coaxial digital and analogue inputs, allows older model TVs and set top boxes, as well as DVD / CD players and other portable music players, to be connected to the DHT-S514.

Dolby Digital and DTS Decoding

Denon Virtual Surround mode delivers home cinema surround sound simulation with Dolby Digital and DTS decoding from Blu-ray, DVD, DVB and other surround encoded media. Advanced psychoacoustic algorithms realistically simulate a multi-channel home theater surround sound speaker system.

Selectable Listening Modes & Night Mode

As well as Virtual Surround mode, three selectable custom sound modes enhance playback of Movie soundtracks or Music content. Dialogue mode delivers clear hi-fidelity sound with no acoustic enhancements. Additionally, Night Mode lets you enjoy hi-fidelity sound without sudden high jumps in volume, so you can watch TV late into the night without disturbing other household members.

Easy to Install, Setup and Use

An HDMI cable is included for quick and easy connection to a flat screen TV. Also included are an optical digital and stereo analogue audio cable. Setup is supported by a quick start guide and owner's manual. The DHT-S514 comes with its own remote control but also has the ability to learn commands from the TV remote control (or a larger 'master' system remote) to reduce the number of remote controls sitting around the room. In case the soundbar is placed in front of the TV, an IR Repeater is included to allow the TV remote control signal to pass through to the TV IR receiver.

NEW FEATURES

- 2-way Soundbar to fit 42" TV screens and up
- Powerful wireless Subwoofer
- HDMI connectivity (1x in / 1x out) with ARC (Audio Return Channel)
- Bluetooth wireless streaming with aptX
- Optical and coax digital inputs as well as an analogue input
- Dolby Digital and DTS decoder decoder built in
- 3 listening modes
- Night Mode

STATE-OF-THE-ART DENON SOLUTIONS FOR MAXIMISING CONTENT QUALITY

- 2-way speaker system with 2x 1/2" tweeters and 2x oval 2" x 5" mid chassis
- Wireless subwoofer with strong 2x 5 1/4" chassis for deep bass attacks
- Dolby Digital and DTS decoding with Denon Virtual Surround
- Dynamic Bass Technology for powerful and precise bass reproduction
- Bluetooth with aptX streaming for CD like sound quality

EASE-OF-USE

- Learns your remote control commands
- Simple remote included
- HDMI in- and output
- Connects directly to your TV with one cable
- Auto input switching
- Bluetooth connectivity for wireless music streaming
- IR-Repeater to pass through TV remote control commands
- Two pair of feet to adjust height when place in front of a TV
- Built-in keyholes for direct wall mounting
- Quick Setup Guide for an easy start
